**6. BIO – DEGRADABLE BAS (including 1% D2W / EPI)**

Conventional plastics do not break down. Litter and landfill waste take years, even decades, to degrade. In landfills, not only do ordinary plastics degrade very slowly but also anything contained within them may not reach their full degradation potential. This results in a needless waste of valuable landfill space.

Therefore, Degradable/Biodegradable bags are developed to make your daily tasks of waste reduction easier, safer and better for the environment.
